EDUCATION

National University of Sciences and Technology
Bachelor of Software Engineering

Islamabad, PK
2020 - 2024

SKILLS - LANGUAGES & FRAMEWORKS

- | | | | |
|--------------|-------------|--------------|----------------|
| ▪ JavaScript | ▪ Express | ▪ NEXT JS | ▪ React Native |
| ▪ Python | ▪ FastAPI | ▪ Postgresql | ▪ Mongodb |
| ▪ LangGraph | ▪ LangChain | ▪ LangFuse | ▪ Git |

WORK EXPERIENCE

Codeaza Technologies

August 2025 - Present

AI Software Engineer

Islamabad, PK

- Built a ReAct-style Trade Validator agent using GPT-5.3 to ensure real-time trade compliance with the most recent exchange fee requirements, lowering compliance errors by 35% and enhancing confidence in auto-published data.
- Designed a LangGraph Fee Extraction agent using GPT-4o to replace hours of manual fee extraction from complex rulebooks, which reduced structured fee extraction time by 30%.
- Engineered a secure NEXTJS internal tool using signed cookie authentication and RBAC to ensure tokens never reach the browser and provide secure access control.
- Reduced frontend development bottlenecks using SWR for caching, Zustand for predictable state, and Chakra UI and Shadcn for reusable components, resulting in 35% faster feature development and fewer redundant API calls.
- Solved fragmented rulebook collection by creating a configuration-based Scrapy & Playwright scraper architecture that ingests rulebooks from over 30 exchange websites, allowing new exchange scraping using configuration rather than code.
- Improved database performance under high microservice load by implementing suitable indexing and query optimization across shared SQLAlchemy models, reducing average query latency by 40% and stabilising cross-service data access.
- Reduced integration friction for external developers by releasing typed Python and TypeScript SDKs alongside API documentation, allowing partners to integrate fee data without developing new clients.
- Refined backend stability by developing MVC-structured FastAPI services capable of handling 10,000+ requests per minute and implementing path-filtered GitHub Actions processes with automated testing, resulting in an 80% reduction in production issues.

Phish Rod

August 2024 - July 2025

Associate Software Engineer

Lahore, PK

- Optimized back-end data processing by designing and implementing robust solutions with Java and Hibernate ORM, leveraging Dynamic Query in Liferay to streamline database operations, resulting in 30% lower response times.
- Orchestrated the migration of legacy Liferay-based systems to a cloud-native architecture on AWS, improving system availability and scalability by 40%.
- Resolved performance bottlenecks in SQL queries by understanding the client's business needs to identify key resources and removing overheads in REST APIs to ensure efficient data management and enterprise application reliability.
- Identified performance and UX gaps to deliver solutions integrating modern web techniques and efficient state management, enabling high-performance applications that extended user session duration by 20%.
- Implemented an RAG-based Cyber Security Consultant chatbot using phi-3.5 large language model and Hugging Face guardrails and embedding to improve users' personalized experience, resulting in a 20% increase in conversion rates.

- Integrated the Firebase backend for the RAG-based Cyber Security Consultant chatbot for user-specific memory retention and context management, resulting in a 60% increase in desktop application usage.
- Migrated legacy Liferay platform to microservices, resolving scalability issues and reducing development time by 40%, directly contributing to stable and faster deployments.

Vaasel Software Solutions

September 2023 – April 2024

Associate Software Engineer – Part-time

Islamabad, PK

- Implemented a centralized property listing platform to address fragmented property listings, enhancing user accessibility, and streamlining the property browsing experience.
- Developed an agriculture-focused e-commerce platform to improve farmer and manufacturer connections that reduced intermediary reliance, cutting intermediary costs by 30% and improving product availability.
- Enhanced team coordination for a food donation platform and led an agile development team, optimizing collaboration and communication, ensuring zero delays and on-time project delivery.
- Deployed chatbots on promotional websites, answering 80% of common user queries, improving user satisfaction scores by 15%, while providing personalized assistance.
- Engineered an AI-powered candidate screening model using machine learning, improving the efficiency of resume processing and reducing HR workload by 40%.
